**CATALOGO
PROFILI DECORATIVI**

2021

Specializzati nella produzione e distribuzione di prodotti in polistirolo specifici per il settore edile. Il polistirolo, o meglio polistirene è un materiale espanso derivato dal petrolio, composto da atomi di carbonio e idrogeno.

Conosciuto anche con la sigla EPS, ossia polistirene espanso sinterizzato, risulta particolarmente leggero. In campo edile, l'utilizzo del polistirolo è favorito dalle sue qualità isolanti, impermeabilizzanti e traspiranti.

L'EPS non permette la crescita di funghi, batteri o muffe. Per la coibentazione in edilizia, non presenta alcun fattore di pericolo per la salute in quanto non rilascia gas tossici.

ilpolistirolo.it utilizza il sistema di taglio "a filo caldo" per la lavorazione.

Il filo conduttore caldo, alimentato da corrente elettrica giustamente dosata sulla base delle caratteristiche del blocco da tagliare, attraversa il materiale assicurando un taglio preciso ed omogeneo.

Grazie al software utilizzato, garantiamo la precisione delle misure e la possibilità di ottenere prodotti estremamente fedeli al progetto.

Una volta terminate le operazioni di taglio, in base all'utilizzo richiesto, gli elementi sono pronti per la consegna o vengono trattati con prodotti indurenti che conferiscono al polistirolo la durezza e resistenza agli agenti esterni.

Grazie alle caratteristiche di flessibilità, semplicità di lavorazione, durabilità, il polistirolo ha riscontrato un enorme successo in tutti i campi di applicazione.

In particolare, per il settore edile è possibile realizzare elementi decorativi resinati per la ristrutturazione edilizia ad uso interno ed esterno.

Con il polistirolo produciamo: profili decorativi per finestre, cappotto, gocciolatoi, ornie, listelli, architrave, marcapiano, sottogronda, fasce a cappotto, mensole, chiavi d'arco, lesene, ed inoltre, colonne e bugne.

Tutti i nostri prodotti sono affidabili, duraturi e di facile applicazione.

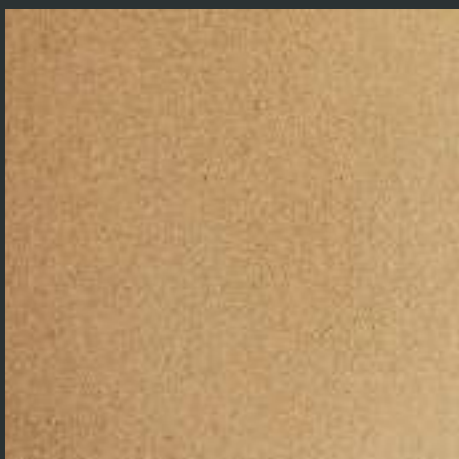

Oltre ai nostri modelli standard, realizziamo su disegno del cliente la forma richiesta.

Indurimento a SPRUZZO

L'effetto è leggermente rugoso caratteristica tipica di questo metodo di indurimento.

Si sceglie questa tecnica quando le forme sono complesse e non possono essere inserite in macchina o quando il quantitativo ordinato è troppo basso per avviare l'impianto di spalmatura.

Indurimento con macchina SPALMATRICE

Effetto liscio omogeneo, i profili vengono induriti in serie utilizzando un impianto di spalmatura che permette di scegliere anche lo spessore di resina da apportare sul pezzo interessato.

Si sceglie quando il quantitativo ordinato è in misura considerevole ad avviare l'impianto di produzione.
